About the Program

The program aims to help learners develop a strong skill set for data analytics, including business analytics and visualization, as well as master the domain knowledge required to excel in this field. The curriculum is thoroughly designed according to industry requirements to create a significant impact. This online program is crafted to assist you in learning industry-standard tools and techniques for data analytics, building real-world projects, and launching your career in Data Analytics.

Individuals with a bachelor's degree, freshers, college students, and working professionals from any educational background with a keen interest in learning are best suited to pursue the data analyst program.

**Start from Beginner
Level**

**To Intermediate
Level**

**To Advance
Level**

This Data Analytics Program will take your career to the next level!

Speciality of This Program

Step into the future of data analysis with 20+ AI tools transforming how businesses work with data. Explore real-world use cases to see how AI automates workflows and uncovers insights. Build future-ready skills to solve challenges, make smarter decisions, and stay ahead in an AI-driven world.

20+ AI Tools

Shape Your Future with 20+ Advanced AI Tools

& Many More

Diverse Role in Industry

Data analytics is a field of study vital to many different jobs within all industries and career levels. It allows the analysis of historical data to predict future events, which can improve business decisions and solve organizational problems. Diverse role one can explore in the industry are –

Data Analyst

Business Analyst

Product Analyst

Marketing Analyst

BI analyst

Finance Analyst

Operations Analyst

BI Developer

Research Analyst

Top Companies for Data Analyst Jobs

Learn alongside goal-oriented individuals & build a strong network in top firms. This is your chance to grow with professionals who work at revered organizations. Take a look at some of the top companies:

Program Highlights

Assess your conceptual understanding as you work on many Business Case Studies with datasets from real companies. Learn at your pace with the flexibility from beginner to advanced level.

6 Month Course Duration

Six month access in LMS

Industry-Oriented Curriculum

Designed by the industry Professionals

CERTIFICATE

DATA ANALYTICS

Learning Outcomes

- Identify and describe complex business problems in terms of analytical models.
- Apply appropriate analytical methods to find solutions to business problems that achieve the stated objective.

Upon completion of this Course, you will receive a verified, industry - recognized certificate from our training platform.

Dedicated Career Support

*According to features list

ATS Resume Building - An excellent resume has the power to unlock countless opportunities. We help you create ATS-friendly resumes that stand out and open doors to success.

Portfolio - A portfolio is a snapshot of all the projects done and skills required during the program that is shareable across media channels. This will help you to showcase your expertise to potential recruiters.

Mock Interviews - Mock Interviews help candidates to reduce their stress and help boost their confidence. You will also learn to crack interviews with our interview preparation sessions.

Exclusive Job Portal - Unlock unparalleled career prospects with our exclusive job portal, facilitating seamless connections with industry-leading companies. Dive into a world of opportunities and fast-track your journey to professional success.

Linkedin Profile Building - Strong LinkedIn profile can contribute to career development. We help you in making a professional LinkedIn Profile.

Saloni Purohit

Jyoti Kaur

Students Testimonials

Manas Jyoti Bohra

The iScale assisted me in securing a placement within three months. The guidance and support from educators were incredible during my journey to become data scientist

Shubham

My learning experience has been great because, despite coming from a non-IT background, educators helped me understand the concepts and secure a Data Analyst job.

Riya Garg

Real-time, industry-oriented end-to-end projects are important and beneficial for me to mention on my resume.

Suryakant

As a working professional, I easily manage my studies and job because the lectures are easy to understand, and the doubt assistance is really helpful for me

Anwar Khan

Transitioning from a non-IT BBA background to learning data analytics here is amazing because mock interviews and project sessions are very beneficial.

Abhinandan

My learning experience is going well because I am gaining confidence through the interview preparation sessions, and the teaching method is incredible.

Vipin Verma

I can learn anytime and anywhere because the lectures and study materials are easily accessible through the mobile app and web.

Bhoopendra

Here, educators skillfully integrate technical concepts with real-time, industry-oriented projects, enhancing our understanding through practical applications.

Students Testimonials

Ashish

The iScale helped me land a job in data science with AI. Despite coming from a non-IT background, their excellent teaching style enabled me to learn, and secured a job.

Kartik

I wasted 4-5 lakh rupees on courses from other platforms, but taking the iScale course was my best decision. This course is the best among all the platforms.

Micheal

The industry-oriented tools that The iScale teaches are commendable. Other platforms don't cover them in as much depth. The iScale is an excellent platform

Mahendra

I never did coding in my career, but when I joined The iScale premium course, coding became very easy for me. The teaching approach is fantastic.

Sanjay

The instant doubt resolution at The iScale is impressive. The live doubt sessions greatly assist me in my learning process.

Rukhsar

The ease of explanation of concepts by educators at The iScale is truly incredible. The doubt support & projects have helped me excel in my career

Shubham

The way The iScale facilitates hands-on work on real-life end-to-end projects is incredibly helpful for developing practical skills

Krunal

The iScale is a trustworthy platform, and the curriculum and teaching methodology are very appropriate. They teach with honesty

Students Testimonials

Abhineet

I'm from London, and The iScale offers excellent facilities for international learners with teaching better than many foreign platforms.

Aditya

Thanks to The iScale's support, today I have secured a good job. After studying here, cracking interviews became much easier for me.

Amit

I come from a commerce background, yet I learned so well at The iScale that I successfully landed a job, thanks to The iScale.

Lakshami

After joining the course from The iScale, I find the topics very easy to understand, and the teaching method is truly special.

Mayurash

The facilities and knowledge provided by The iScale are the best compared to other platforms, and I really like the content.

Gaurav

At The iScale, everything is taught in Hindi in a very simple way, and the courses are also affordable.

Abkash

Whenever I have doubts, special sessions are conducted for me. This is the best part of The iScale, it provides personalized guidance.

Mayur

Coming from a non-technical background, I can still understand everything at The iScale thanks to their great teaching.

Students Testimonials

Amit

I like the unique teaching style at The iScale because everything is taught here with great simplicity.

Raj

I am from a non-IT background, yet at The iScale I understand both concepts and coding very well.

Swapnil

I had taken Python lectures from other places before, but couldn't understand them. At The iScale, everything is so easy to understand

Risabh

I liked The iScale's free course on YouTube, so I took the premium course and now understand everything even better. The iScale is the best.

Rohit

The iScale empowered me to learn despite my humble background, and I genuinely enjoy studying here.

Shiva

The end-to-end projects at The iScale teach you a lot in a practical way, and their teaching method is truly unique

Abhishek

The iScale's excellent teaching method motivated me to learn Data Analytics in a detailed and thorough way.

Esha

The iScale's live doubt support is exceptional, making learning easy and effective.

Students Testimonials

Abhinandan

Thanks to The iScale, I successfully transitioned my career and landed a data-driven job.

Kishan

At The iScale, the way of practicing questions and giving explanations is very simple and easy to understand.

Raja

Whenever I have doubts, The iScale makes it easy to get them cleared through live classes.

Rohit

The iScale's content and curriculum are very well-sequenced and organized, which makes learning interesting for me.

Dharmendra

At The iScale, all problems are solved during classes, which makes it easy for me to understand everything.

Ritik

The Educators at The iScale have great expertise in teaching, and I am very happy studying here.

Vikram

The iScale's content is aligned with industry standards, which makes learning relevant and effective

Diksha

The iScale not only teaches skills but also builds confidence, making every learner feel ready to take on real-world challenges.

Talk With Community

We have conducted the Interview Experience Talk of the Achievers. Focused, hard work is the real key to success. Keep your eyes on the goal, and just keep taking the next step towards completing it.

There are approximately 400,000 bytes of data for every grain of sand on earth. For managing this huge data, Data Analysts' demands are growing globally.

You can be the Next!

CURRICULUM

Module : 1 Fundamentals of Python

UNIT 1: The Basics of Python Programming

- Understanding Problem Solving
- Why Python
- What is an IDE (Integrated Development Environment)
- Installation of Python – Anaconda & Launching of Jupiter Notebook
- Write your first Python Program

UNIT 2: Variables and Operators in Python

- Python Arithmetic Operators
- Python Assignment Operators
- Python Boolean & Logical Operators
- Python Comparison Operators
- Python Bitwise Operator

UNIT 3: Built-in Functions of Python

- Round Function & Divmod Function

- Isinstance Function & Pow Function,
 - Input Function , int function, Float Function
 - Len, Min and Max function
 - Sorted Function and help function
-

UNIT 4: Control Flow Statements

- If Condition
 - If else Condition
 - If-Elif-else Condition
 - Nested if
-

UNIT 5: Concepts of Loops

- While Loop
 - Break & Continue Statements
 - For Loop & Range Function
 - Nested Loops in Python
-

UNIT 6: User-Defined Functions in Python

- Introduction & Doc String
 - Functions Input Arguments
 - Functions Order of input Arguments
 - Functions Return Statement
 - Function Variable Number of Input Arguments
 - *args and **kwargs in Function
 - Lambda function
-

UNIT 7: Python Strings

- Introduction to String
- Indexing & Slicing

- Methods – strip, lower, upper
 - Methods – replace, split, capitalize
 - Methods – title, swapcase, find, index
 - Methods – isalnum, isalpha, isdigit
 - Methods – isupper, islower, istitle, startswith, endswith
 - Multiline String & checking of substring in String
 - Converting String into another Data Type
 - Loops in string
-

UNIT 8: Python List

- Introduction to List
 - Slicing on List
 - Indexing on List
 - Methods - Append, Extend & Insert in List
 - Methods - Remove, Pop, Clear
 - Methods – Count, Max,Min
 - Reverse, Index Count, Copy
 - Using Loops in List
 - Using conditional statement in List
-

UNIT 9: Python Tuples

- Introduction, Concatenation & Nesting
 - length, count, index method, indexing & slicing
 - The tuple() Constructor
 - Duplicates in tuples
 - max, min, unpacking of tuples
 - conditional statement and loops in tuple
-

UNIT 10: Python Sets

- Introduction to Set

- Methods - add, update, remove, discard, pop, clear, del, union
 - Methods - intersection_update, intersection, difference_update, difference
 - Methods - symmetric_difference_update, symmetric_difference
 - Methods - isdisjoint, issuperset, issubset
 - Methods - set(), max, min, copy, loops in sets
-

UNIT 11: Python Dictionary

- Introduction to Dictionary
- Methods-, len, dict constructor fromkeys, setdefault
- Methods - get, keys, values, items, update
- Methods - pop, popitem, del, clear, copy
- Methods - Nested Dictionaries, loops in dictionary

Module : 2 Python Libraries

UNIT 1: NumPy

- Introduction to Numpy
- Numpy - Nd Array Object.
- Numpy - Data Types.
- Numpy - Array Attributes.
- Numpy - Array Creation Routines.
- Numpy - Array From Existing.
- Data Array From Numerical Ranges.
- Numpy - Indexing & Slicing.
- Numpy – Advanced Indexing.
- Numpy – Broadcasting.
- Numpy - Iterating Over Array.

- Numpy - Array Manipulation.
 - Numpy - Binary Operators.
 - Numpy - String Functions.
 - Numpy - Mathematical Functions.
 - Numpy - Arithmetic Operations.
 - Numpy - Statistical Functions.
 - Sort, Search & Counting Functions.
 - Numpy - Byte Swapping.
 - Numpy - Copies & Views.
 - Numpy - Matrix Library.
 - Numpy - Linear Algebra.
-

UNIT 2: Pandas

- Introduction to Pandas
- Reading Data From Different File Systems
- Python Pandas – Data Frame
- Python Pandas - operations
- Python Pandas - Basic Functionality
- Reading Data From Different File Systems
- Python Pandas – Re-Indexing Python
- Pandas – Iteration
- Python Pandas – Sorting.
- Working With Text Data Options & Customization
- Indexing & Selecting
- Data Statistical Functions
- Python Pandas - Window Functions
- Python Pandas - Date Functionality
- Python Pandas –Time Delta

- Python Pandas - Categorical Data
- Python Pandas – Visualization
- Python Pandas – Tools

UNIT 3: Matplotlib

- Introduction to Matplotlib
- Bar chart
- Scatter Plot
- Bar Graph
- Histogram
- Pie Chart
- Stem Plots
- Box Vs Whisker Plot
- Area Vs Stack Plot
- Step Plot
- Fill_Between Plot
- subplot
- Savefig
- Axis matplotlib plots
- Text in matplotlib plots

UNIT 4: Seaborn

- Introduction to Seaborn
- Heatmap plot method
- Count plot method
- Violin Plot method
- Pair plot method
- Strip Plot method
- Box plot method
- Factor plot method
- Cat Plot method
- Styling plot method
- Facet Grid Method
- Line Plot method
- Histogram plot method
- Bar plot method
- Scatter plot method

UNIT 5: Plotly

- Introduction to Plotly
- Bubble Charts
- Bar Charts
- Pie Charts
- Creating Maps
- Time Series

Project 1: WhatsApp Chats Analysis - WhatsApp is one of the most used messenger applications today so we can use WhatsApp chats for analyzing our chat with a friend, customer, or a group of people.

Project 2: Covid-19 Impacts Analysis - Covid-19 impacted the global economy. This project is to analyze the spread of Covid-19 cases and all the impacts of covid-19 on the economy.

Project 3: Google Image Scrapping - Scraping Google Images, involves extracting data from website the project involved sending requests to the Google Images website, parsing the HTML content, and extracting relevant image URLs using BeautifulSoup. This project showcases technical skills in Python programming and data analytics.

Project 4: Smart Price Comparison Tool - In this project, you will develop a Python-based tool that compares product prices across different platforms or datasets. It will involve extracting and organizing data, applying comparison logic, and identifying the best available deals. You will also learn how to clean and process product information for accurate results. This project is highly useful in building skills for e-commerce, automation, and data handling.

Project 5: Universal Graph Generator - Streamlit based web app that lets you upload any data file (like from Excel), pick what kind of chart you want, and instantly see your data as a graph. It's great for professionals, or anyone who wants to quickly explore, understand, and share their data visually.

Project 6: College Analysis – Dash Web - Using pandas and numpy for data analysis, and matplotlib for visualizations, it gives an easy-to-understand summary of options. The results and visual insights can also be explored interactively through a dynamic Dash web app, making the tool useful for counseling, comparison, and smarter college choices.

Module : 3 SQL

UNIT 1: Introduction and Installation Software

- Roadmap to learn SQL & syllabus discussion
- Download & Install MySQL
- Download & Install XAMPP
- Download & Install PostgreSQL & Pgadmin

UNIT 2: Fundamentals of SQL

- Introduction to SQL
- Database Fundamental
- Learning Resources - (Cheat Code | Practice Dataset | PDF Notes & Books | Learning Website | Interview Questions)

UNIT 3: Case Study with Example

- Create Database | Drop Database | Create Table | Insert Table | Drop Table
- Case study with XAMPP Software
- Case study with MySQL software
- Case study with PostgreSQL

UNIT 4: Data Types and Keys

- All Data Type in SQLs)
 - ER / Database Diagram Example: Amazon Ecommerce
 - Database Keys
 - Cardinality of Relationships
-

UNIT 5: DDL Commands for SQL

- DDL Commands for Databases: Create | Drop
 - DDL Commands for Table: Create | Truncate | Drop
 - Data Indignity
-

UNIT 6: Constraints

- Constraints in MySQL (NOT NULL | UNIQUE | PRIMARY KEY)
 - Constraints in MySQL (AUTO INCRIMENT | CHECK | DEFAULT | FOREIGN KEY)
 - Referential Actions (Restrict | CASCADE | SET NULL | SET DEFAULT)
-

UNIT 7: Alter Table

- ADD Columns in Alter Table
 - DELETE Columns in Alter Table
 - MODIFY Columns in Alter Table
-

UNIT 8: ADD, Editing and Deleting Constraints

- ADD Constraints
- DELETE Constraints
- EDIT Problems in MySQL, Drop Constrains

UNIT 9: INSERT Query

- INSERT query
 - INSERT query variation
 - INSERT multiple values
-

UNIT 10: SELECT Query

- SELECT all columns
 - Filter columns
 - Alias | renaming columns
 - Create expression using columns
 - Constant value
 - DISTINCT(unique) values from a column
 - DISTINCT Combinations
 - Filter rows WHERE clause
 - BETWEEN operator
 - IN and NOT IN Operator
-

UNIT 11: UPDATE Query

- Update Query to update row(s)
 - Update Multiple Columns
-

UNIT 12: DELETE

- DELETE Query to delete row(s)
 - Deletion based on multiple conditions
-

UNIT 13: Aggregate Functions

- MAX() & MIN()
 - AVG()
 - SUM()
-

UNIT 14: Scalar Functions

- ABS()
 - ROUND()
 - CEIL() & FLOOR()
-

UNIT 15: SQL Joins

- What are SQL joins?
 - Types of Joins
 - Cross Joins --- Cartesian Products
 - Inner Joins
 - Right Joins
 - Left Joins
 - Full Outer Join
 - Set Operations
 - Self-Join
 - Filtering Columns
 - Filtering Rows
-

UNIT 16: Subquery

- What is Subquery?
- Scalar Subquery
- Row Subquery

- Table Subquery
 - Correlated Subquery
-

UNIT 17: Sorting

- Fundamental of SQL Sorting
 - Sorting top 10 data
 - Sorting Descending Orders
 - Sorting functions in datasets
-

UNIT 18: Grouping

- Fundamental of SQL Grouping
- Grouping Average Function
- Group By on multiple columns
- Sorting Descending Orders
- Sorting functions in datasets

UNIT 19: Project & Case Study:

Project 1: Indian Premier League (IPL Dataset)

- Case Study in Indian Premier League
- Find the top 5 batsmen in IPL
- Find the 2nd highest 6 hitters in IPL
- Find Batsman (M.S Dhoni, Virat Kohli) performance against all IPL team
- Find the top 10 batsmen with centuries in IPL using Sub-Quires
- Find the top 5 batsmen with the highest strike rate
- Find 5 Batsman who have played a min of 1000 balls

UNIT 20: Project & Case Study:

Project 2: Shipping E-Commerce (Sorting: Smart Phone Datasets)

- Find the top 5 Samsung phones with the biggest screen size
- Sort all the phones in descending order of the number of total cameras
- Sort data on the basis of ppi in decreasing order
- Find the phone with 2nd largest battery
- Find the name and rating of the worst rated apple phone
- Sort phones alphabetically and then on the basis of rating in desc order
- Sort phones alphabetically and then on the basis of price in ascending order

Project 3: Music Store Analysis

In this project, you will work with a music store database to practice SQL queries. It includes tasks like retrieving customer details, analyzing sales records, and tracking popular tracks and artists. You will also learn how to apply joins, aggregate functions, and filtering to extract meaningful insights. This project strengthens SQL skills through real-world data analysis.

Module : 4 Power BI

UNIT 1: Introduction to Power BI

- Complete Overview of Power BI
 - The Power of Data Visualization
 - What are the BI & BI tools?
 - What is Power BI
 - Why Power BI? The Modern BI Choice
 - Power BI: Key Advantages
-

UNIT 2: Creating Charts (Basic)

- Introduction to Basic Charts
 - Create a Column Chart
 - Create a Stacked Column Chart
 - Create a Pie Chart
 - Create a Donut Chart
 - Create a Ribbon Chart
 - Create a Funnel Chart
 - What are the Include and Exclude
 - View selected Data and Export in CSV
 - OVERVIEW / RECAP
-

UNIT 3: Tables and Matrix

- Introduction to Table and Matrix
- How to create a Table & Formatting and Styling of a Tables
- How to use Conditional Formatting in Table

- How to change Aggregations
 - How to Create a Matrix & Formatting and Styling of a Matrix
 - How to use Conditional Formatting in Matrix
 - How to create Hierarchies in Matrix
 - Add Total and Sub-Total in Matrix
 - Key Difference Between Matrix & Tables
 - How to change Number Formatting
-

UNIT 4: Cards and Filters

- What is Cards and Filters in Power BI
 - How to create a Number Card
 - How to create a Date Card
 - How to create a Text Card
 - How to create a Multi-Row Card
 - How to Format a Card
 - How to apply Filter on Visual
 - How to apply Filter on this Page
 - How to apply Filter on All Pages
 - How to use Drill Through
-

UNIT 5: Slicers

- Introduction to Slicers and its types
- How to create and format Text Slicers
- How to create Date Slicers
- How to format Date Slicers
- Creating a Number of Slicers

UNIT 6: Advance Charts

- Introduction to Advance Charts in Power BI
 - How to create a Waterfall Chart
 - How to create a Guage Chart
 - How to create a Line Chart
 - How to create a Stacked Area Chart
 - Line vs Stacked Column Chart
 - Line vs Clustered Column Chart
 - What are Plots and How to create a Scattered Plot
 - How to create a Tree Map
 - Line Chart drill with Slicers
-

UNIT 7: Maps

- Introduction to Maps in Power BI
 - How to create a Basic Map
 - How to create a Filled Map
 - How to create a Map with pie chart
 - How to format a Map
-

UNIT 8: KPI & Other Functions

- Introduction to Advance Function
- How to use KPI Visualization Tool
- Learn Updates in MS Power BI
- Create a Key influencer in Power BI
- Create a Decomposition Tree in Power BI
- Create a Python & R Scripting in Power BI
- Third-Party Extensions 3 Icons Introduction in Power BI

UNIT 9: Insert & Action Functions

- Introduction Insert & Action
 - How to Insert Image in Power BI
 - Create Insert Text in Power BI
 - How to Insert Shapes in Power BI
 - Create Insert Buttons in Power BI
 - Use Web URL Action in Power BI
 - Work on Page Navigation Action in Power BI
 - Use Bookmark Action in Power BI
 - How to create Drill through Action in Power BI
 - Create Power BI Account
-

UNIT 10: Advanced Extra Charts

- Introduction to Advanced Extra Charts in Power BI Desktop
 - Create Scroller in Power BI
 - Create a Word Cloud in Power BI
 - Create Infographics in Power BI
 - Create Drill-Down Donut Chart in Power BI
 - Create Drill-Waterfall Chart in Power BI
 - Create Play Axis Slicer in Power BI
 - Create an Animated Bar Chart Race in Power BI
 - Create Sunburst Chart in Power BI
 - Create Sankey Chart in Power BI
 - Create Calendar & Timeline Slicer
-

UNIT 11: Create a Superstore Report

- Create Reports and Dashboard Documentation
- Collaborate, share and integrate across products documentation
- Get Power BI samples

- Use Report themes
 - Add conditional table formatting
 - Ways to share your work
 - Organize work in the workspaces
 - Publish to web
-

UNIT 12: Dashboard Functions

- How to Publish Report to Power BI Service
 - Export Power BI Report into PPT, PDF & PBIX format
 - Create a Pin Live Dashboard in Power BI
 - What is Comment, Share & Subscribe in Power BI Reports
 - How to Refresh Reports Automatically in Power BI Service
 - Free Data Files Source for Practice
-

UNIT 13: DAX Functions

- DAX Overview
 - Basic DAX Queries
 - Advanced DAX Queries
 - Advanced DAX Queries with Use Cases
 - DAX Notes and Datasets
-

UNIT 14: Power Query

- Introduction to Power Query
- Data Sources in Power Query
- Power Query Editor Interface
- Data Cleaning Basics
- Data Shaping
- Common Real-World Use Cases

UNIT 15: Projects Microsoft Power BI Dashboards

Project Title: Virat Kohli ODI T20 Performance Index:

Description: Solve a problem statement with the help of Virat Kohli ODI T20 Performance Index Power Bi Dashboard and discuss multiple case studies.

Project Title: Netflix Stock Prediction & runtime by genres.

Description: Solve a problem statement with the help of Netflix Stock Prediction Datasets & analysis the runtime by genres in Power Bi Dashboard and discuss multiple case studies.

Project Title: Real Estate Data Exploration

Description: This project focuses on analyzing real estate data using Power BI to uncover trends, patterns, and insights. Learners will create interactive dashboards to visualize property prices, demand, and regional comparisons. The project highlights how data-driven insights can support smarter investment and business decisions in the real estate industry.

Project Title: IPL Data Analytics

Description: This project uses Power BI to analyze IPL data and uncover insights into team performance, player statistics, and match trends. Interactive dashboards help visualize patterns, compare results, and support data-driven decisions in the world of cricket.

Project Title: Analysis of Amazon Global Superstore

Description: This project focuses on analyzing the Amazon Global Superstore dataset using Power BI to uncover sales trends, customer behavior, and product performance. Interactive dashboards visualize key metrics, enabling data-driven insights for better business decisions.

Project Title: OTT Analytics and Insights

Description: This project uses Power BI to analyze OTT platform data, uncovering viewer behavior, content performance, and engagement trends. Interactive dashboards help visualize insights, enabling data-driven strategies for content optimization and audience growth.

Project Title: UNICEF Global Data Analysis

Description: This project uses UNICEF's global data on electricity access and poverty, analyzed through Power BI. It involves building an interactive map to visualize poverty and electricity access worldwide, and studying the correlation between access rates and poverty levels to highlight regions most in need of support.

Module : 5 Advance Excel

UNIT 1: Fundamental of Excel: Beginner Level

- Basic Features - Introduction
- Basic Formatting
- Using Formulas

- Save File
 - Filter & Sorting
 - Conditional Formatting
 - Insert & Delete Columns or Rows
 - Find & Remove Duplicates
 - Merge and Centre
-

UNIT 2: Intermediate Level of Excel

- Rounding of Numbers
 - Autofill in Excel
 - Add or Edit Comment
 - Filters for Data Manipulation
 - Sorting on multiple columns
 - Insert Table
 - Slicers
-

UNIT 3: Moderate Level of Excel

- Creating an Excel Column Chart
 - Working with Excel Pie Charts
 - Chart Group (Line, Area, Waterfall)
 - Insert Picture or Shapes
 - Add link or hyperlink
 - Excel Sparkline's
 - Add Drop Down List
 - Split Text
 - Page Layout Tab and Ribbon
 - Printing Excel Worksheet
-

UNIT 4: Advance Level of Excel

- Formula Tabs & Library
- Define Names
- Formula Auditing
- Calculation Options & Watch Window
- Get and Transform Data
- Queries and Connections
- Excel data validation
- Excel PivotTables
- Excel conditional functions
- Excel Text based Functions
- Excel “What if?” Tools
- Conditional IF Function IN [EXCEL]
- Result Format with Nested-IF [Excel]
- XOR Formula (Exclusive OR) EXCEL
- Excel VLOOKUP Function
- Advance VLOOKUP Formula

UNIT 5: Data Processing and Create Visualization Dashboard

Project Title: Analysis the Online Store Annual Report Like Mantra | AJio | Amazon | Etc.

Description: Importing data from text files Create a fully functional online store dashboard with the analysis the store annual reports and learn data cleaning, processing, analysis and dashboard creation in excel.

Module : 6 Tableau

Tableau is a business intelligence tool which is widely used in the analytics industry. It is one of the top data visualization tools used for data analysis and getting data driven business insights. Learn various techniques to extract meaning from large datasets, detailed approaches to design dashboards. Learn to create storyboards using Tableau which enables us to transform complex data into meaningful insights.

UNIT 1: Creating Visualizations

- Text Table and Formatting Visuals
 - Heatmap and Highlight table
 - Lines Area Chart
 - Circle, Side by Side Circle View and Shapes
 - WordCloud
 - Scatter Plot
 - Histogram Bins
 - Gantt view and Waterfall Chart
 - Reference lines and bands, Distribution band Bullet graphs
 - Dual Axes Visuals Part 1
 - Dual Axes Part 2
-

UNIT 2: Filtering, Sorting & Connecting

- Animated Charts
- Funnel Charts its types
- Donut Chart Multiple Donut Chart

- Dumbbell, Barbell or DNA Chart
 - Butterfly Chart
 - Box Whisker Plot
 - Filters in tableau part 1
 - Filters in tableau part 2
-

UNIT 3: Dashboard & Actions

- Parameters in tableau
 - Sets in tableau
 - Table Calculation
 - Joins & Unions
 - Data Blending
 - Tableau dashboard
 - Tableau Server
-

UNIT 4: Review of Tableau Desktop

- | | |
|--------------------|-------------------|
| • Bar chart | • Pie chart |
| • Line chart | • Tree map |
| • Scatter plot | • Motion chart |
| • Geographic map | • Histogram |
| • Filled map | • Dashboard |
| • Crosstab report | • Groups |
| • Side by side bar | • Sets |
| • Combines axis | • Dates |
| • Stacked bar | • Calculations |
| • Dual axis | • Quick table |
| • Bar in bar | • Parameters |
| • Heat map | • Reference lines |
| • Highlight table | |

Project 1: FIFA World Cup Trends

This project leverages Tableau to analyze FIFA World Cup data, exploring team performance, player statistics, and tournament trends. Interactive visualizations provide clear insights, helping understand patterns and make data-driven observations about the games.

Project 2: Analytics for Sports Performance

This project uses Tableau to analyze sports data, focusing on player performance, team statistics, and game trends. Interactive dashboards help visualize insights, enabling data-driven decisions to enhance performance and strategy in sports.

Project 3: London Automobile Ride Analysis

This project uses Tableau to analyze automobile data, examining vehicle performance, sales trends, and market patterns. Interactive dashboards help visualize insights, enabling data-driven decisions for improving product strategy and business performance.

Module : 7 20+ AI Tools

• Introduction to Prompt Engineering

Introduction to Prompt Engineering covers the fundamentals of design-ing effective prompts to interact with AI models. It includes structuring questions, providing context, and experimenting with different prompt techniques to generate accurate and relevant AI outputs.

• ChatGPT

A versatile AI assistant by OpenAI that excels in answering questions, writing content, coding, and problem-solving. It is widely used for learning, automation, and boosting productivity.

• Gemini

Google's powerful multimodal AI model that can understand text, images, and code. It is best for research, reasoning, and creating advanced AI-driven applications.

• NotebookLM

An AI research assistant that summarizes, organizes, and explains documents. It is highly useful for students, researchers, and professionals to study and work efficiently.

- **Groq**

Known for its lightning-fast AI processing speed, making responses almost real-time. It is mainly used for chatbots, analytics, and high-performance AI tasks.

- **Perplexity**

An AI-powered search engine that delivers accurate answers with cited sources. It is ideal for research, fact-checking, and exploring topics in depth.

- **Claude**

Anthropic's AI assistant designed with safety and reasoning at its core. It is used for thoughtful writing, coding help, and intelligent conversations.

- **Gamma AI**

A tool that creates professional presentations, documents, and webpages quickly. It is best for professionals and students who need high-quality designs effortlessly.

- **MidJourney**

An AI image generator that creates stunning and artistic visuals from text prompts. It is widely used by designers, marketers, and creative professionals.

- **Leonardo AI**

A creative design tool for generating game assets, digital art, and graphics. It is ideal for artists and content creators looking for customizable visuals.

- **Freepik AI**

A platform offering AI-generated stock photos, vectors, and illustrations. It is useful for marketers, designers, and businesses that need ready-to-use visuals.

- **Krea AI**

A creative AI tool that generates unique images, animations, and concept art. It is best for storytellers, designers, and digital creators.

- **OpenAI Sora**

A groundbreaking AI that transforms text into realistic, high-quality videos. It is perfect for filmmakers, advertisers, and storytellers.

- **Google AI Studio**

A developer platform to test, explore, and deploy Google's AI models. It is mainly used for building, scaling, and integrating AI applications.

- **Notion AI**

Enhances the Notion workspace by helping with writing, summarizing, and brainstorming. It is highly useful for productivity, project management, and note-taking.

- **Nano Banana**

A lightweight AI designed for fast and efficient image generation. It is best for quick creative experiments and visual content creation.

- **Manus AI**

An intelligent writing assistant that improves grammar, tone, and clarity. It is widely used for professional emails, reports, blogs, and academic writing.

- **DeepSeek**

An open-source AI platform offering efficient and reliable models. It is best for coding, data analysis, and advanced research tasks.

- **Meta AI**

Provides innovative open-source models like LLaMA for AI development. It is mainly used by researchers and developers for custom AI solutions.

- **Ollama**

A platform that allows users to run AI models locally on their devices. It is great for privacy-focused users who want customizable AI.

- **QuillBot**

A writing tool that specializes in paraphrasing, summarizing, and grammar correction. It is ideal for students, writers, and professionals to refine their content.

- **ElevenLabs**

is a powerful AI voice platform that turns text into incredibly realistic, human-like speech with emotion and natural intonation. It supports voice cloning, multilingual text-to-speech, and professional voiceovers videos.

Module : 8 Placement Preparation.

Crafting an impressive Resume - A resume is a summary of your career, whether yours is just getting started or has been going on for years. In this program, we will help you in crafting an impressive resume.

Portfolio Building - A portfolio helps you to organize information so that you're always ready to apply for jobs. Your portfolio creates an image of you in an employer's mind. In this curriculum, you will learn about building the best portfolio.

Interview Tips - Interview tips will help you gain valuable insights into effective communication and key strategies to showcase your skills confidently.

Online face-to-face mock interviews help you train & prepare for job interviews in a no-pressure, stress-free environment simulating a real job interview. Mock interviews will be conducted for you in this course.

**Learn tirelessly, Work diligently,
and
Success will be your Melody.**
